

WES ISHEE

SENIOR SOFTWARE ENGINEER — DISTRIBUTED SYSTEMS & PLATFORM

wesishee@gmail.com | (512) 996-7257 | Austin, TX | linkedin.com/in/wesishee

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years designing, building, and operating high-throughput distributed systems and internet-scale APIs. Deep experience owning services end-to-end in production, from architecture and versioning through incident response and performance optimization. Skilled in applying AI tooling and agents to accelerate engineering delivery, strengthen observability, and cut manual toil. Proven track record mentoring engineers and partnering cross-functionally to ship systems that drive measurable business impact.

SKILLS

Languages: PHP, Python, TypeScript, SQL, APEX

Distributed Systems & Cloud: AWS, Docker, Kubernetes, Kafka, Storm, Consul, Vault

Observability & Reliability: Prometheus, Grafana, ELK, Splunk, Graphite, Victoria Metrics

Datastores: MySQL, Redis

Tooling & Practice: Git, CI/CD, Jira, JetBrains IDEs, AI-assisted engineering (agentic workflows, LLM tooling)

PROFESSIONAL EXPERIENCE

Salesforce (Pardot) July 2014 – Present

Senior Software Engineer – Technical Lead

- Owned architectural design and delivery of a cross-functional, automated system detecting application usage overages and generating upsell opportunities at scale, generating **\$36M+** in revenue; partnered with Sales, Product, and Legal to define compliance policy and build the automated workflow.
- Applied **AI agents** to redesign observability across 5 sync pipelines with divergent implementations, building dashboards and alerts on Prometheus/Grafana and ELK that proactively surfaced issues and reduced support investigations.
- Delivered a Slack-based self-service workflow in Typescript for demo environment provisioning, cutting time-to-value by **96%** and removing manual ops overhead.
- Mentored 6 engineers on system design, scalability, and production ownership, including two mentees who won Salesforce's All-Star award (top 1% of performers).
- Designed and implemented the majority of Pardot's v5 REST API, maintaining **100% backward compatibility** across versions while adding 10 new endpoints — treating versioning, reliability, and consistency as first-order design constraints.
- Redesigned Pardot's core object sync framework serving high-throughput customer workloads, cutting average sync queue size by **73%** and securing a new multi-million dollar contract on the strength of the reliability gains.
- Migrated authentication for **100% of customers** to Salesforce SSO, unifying identity across products with zero-downtime cutover.
- Built an automated email spam-detection system that identifies abusive sending behavior and revokes privileges in real time, protecting platform-wide deliverability.
- Shipped the Engagement Studio transfer API, letting customers move programs between business units instantly instead of hours of manual setup.
- Built a usage-metrics pipeline integrating scuba.io with ELK, Splunk, and S3 for cross-team analytics and monitoring.

EDUCATION

University of Georgia — Bachelor of Science, Computer Science
